

Polystyrene Particles-Rhodamine B

Description

Beijing Biotyscience Co. Ltd provides high-quality polystyrene Fluorescent microspheres of different sizes. PS microsphere products have ideal microspherical appearance, no other impurities, small differences between batches, and good repeatability.

Product Information

Type	Polystyrene Particles-Rhodamine B
Concentration	1%
Excitation Wavelength	550 nm
Emission Wavelength	573nm
Diameter	50 nm-100 um
Buffer	Supplied in DI Water.
Size	10 ml
Storage	Stored at 4 °C. Do not freeze. Protect from light.

Storage

Store product away from direct sunlight at 2-8° C.

Do NOT freeze.

When stored as specified the product is stable for at least six months.

Address: 北京市房山区良乡凯旋大街建设路 18 号

Notes

Please use PS microspheres after fully stirring and ultrasonic dispersion.

Store at room temperature/4 degree and avoid light, avoid drying into blocks and avoid freezing and thawing.

Fluorescent microspheres are soluble in organic solvents such as acetone/chloroform/tetrahydrofuran, so they should not be mixed with the above reagents.

Adding high concentration of ethanol to the solution will cause the leakage of fluorescent substances and decrease the fluorescence intensity of the microspheres.

The working temperature should not exceed 100° C to prevent the polystyrene microspheres from melting, deforming or sticking together.
